

SLICKER® CLASSIC

THE ORIGINAL ROLLED RAINSCREEN

Slicker® Classic is a vertically channeled, three-dimensional rainscreen matrix that creates a continuous drainage and drying space behind exterior cladding. By promoting bulk water drainage and airflow, a thermal break and pressure equalization, Slicker® Classic helps reduce trapped moisture, protect against mold and rot, and support long-term wall assembly performance.

Drains bulk water away from the wall assembly, reducing the risk of moisture damage behind the cladding

Creates continuous airflow behind the cladding to help walls dry more quickly

Prevents damage from surfactants by separating the cladding from the weather resistive barrier

Saves time and labor costs by eliminating the need for furring strips

Protects the wall assembly from the deteriorating effects of mold and rot

THICKNESS (Size of Gap)	0.25 in (6 mm)
WIDTH	39.37 in (1 m)
LENGTH PER ROLL	46.5 ft (14.17 m)
COVERAGE PER ROLL	150 ft ² (14.17 m ²)
MAX. UV EXPOSURE	30 Days
